Logistic Regression

Logistic regression is a fundamental concept in the field of machine learning and statistics that plays a crucial role in binary classification tasks. It's a widely used algorithm for predicting the probability of an instance belonging to a particular class. Despite its name, logistic regression is actually a classification algorithm, not a regression algorithm, as it's primarily used for predicting categorical outcomes.

The project idea is to predict Credit card Fraud, you can install any data anywhere related to it, you gonna find a lot of examples in Kaggle and many others.

- Install any data you want
- Apply logistic Regression

The main goal is to understand it and the use cases as well
